

MQPERF1

Intro

Lyn Elkins –
elkinsc@us.ibm.com

Legal Disclaimer

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.

YOUR MILAGE WILL VARY

Agenda

Day 1	Time
Workshop intro and an overview of MQ for z/OS internals	9:00 - 10:00
Break	10:00-10:15
An introduction to MQ SMF	10:15-11:15
Lunch and Lab - Running MP1B	11:15-12:45
MQ SMF Statistics - The big three in detail	12:45-1:30
Break	1:30-1:45
MQ SMF Statistics - New Statistics (V8 & V9)	1:45 - 2:15
Lab - Examining the New Statistics	2:15-3:00
MQ SMF - Introduction to Task Records	3:00 - 3:45
The MQ JES logs	3:45 - 4:15
Lab - Looking at the JES logs	4:15 - 5:00

Agenda

Day 2	
Review, Q&A	9:00 - 9:15
Lab - Examining the Task Record with MP1B	9:15 - 10:15
MQ SMF Accounting - Channel accounting	10:15 - 10:45
Break	10:45-11:00
MP1B - Other reports (summaries, etc.)	11:00 - 11:30
MQSMFCSV - A different way to process	11:30- 12:15
Lunch & Lab - Downloading and processing MQSMFCSV	12:15-1:30
MQSMFCSV - Queries	1:30 - 2:30
Lab - Intro Queries	2:30 - 3:30
Lab - Intermediate Queries	3:30 - 4:30

Administration

You know the routine:

Phones on vibrate, please

Know where the exits are

Tray tables in upright and locked position

Why are you here?

Please introduce yourself, give a brief description on what you want to get out of this session and tell us what your experience is with MQ for z/OS performance, tuning and problems determination.

A bit of background

To understand performance tuning, and in some measure problems determination – a bit about the internals of the queue manager is helpful. So we are going to start there!

Agenda – QMGR Internals Overview

- Why is this important to me?
- One of these things is not like the other
- How are messages stored?
 - Private Queues
 - Shared Queues
- First line managers - the components of a z/OS queue manager
- What happens on a API call?
- Summary

Why is this topic important to me?

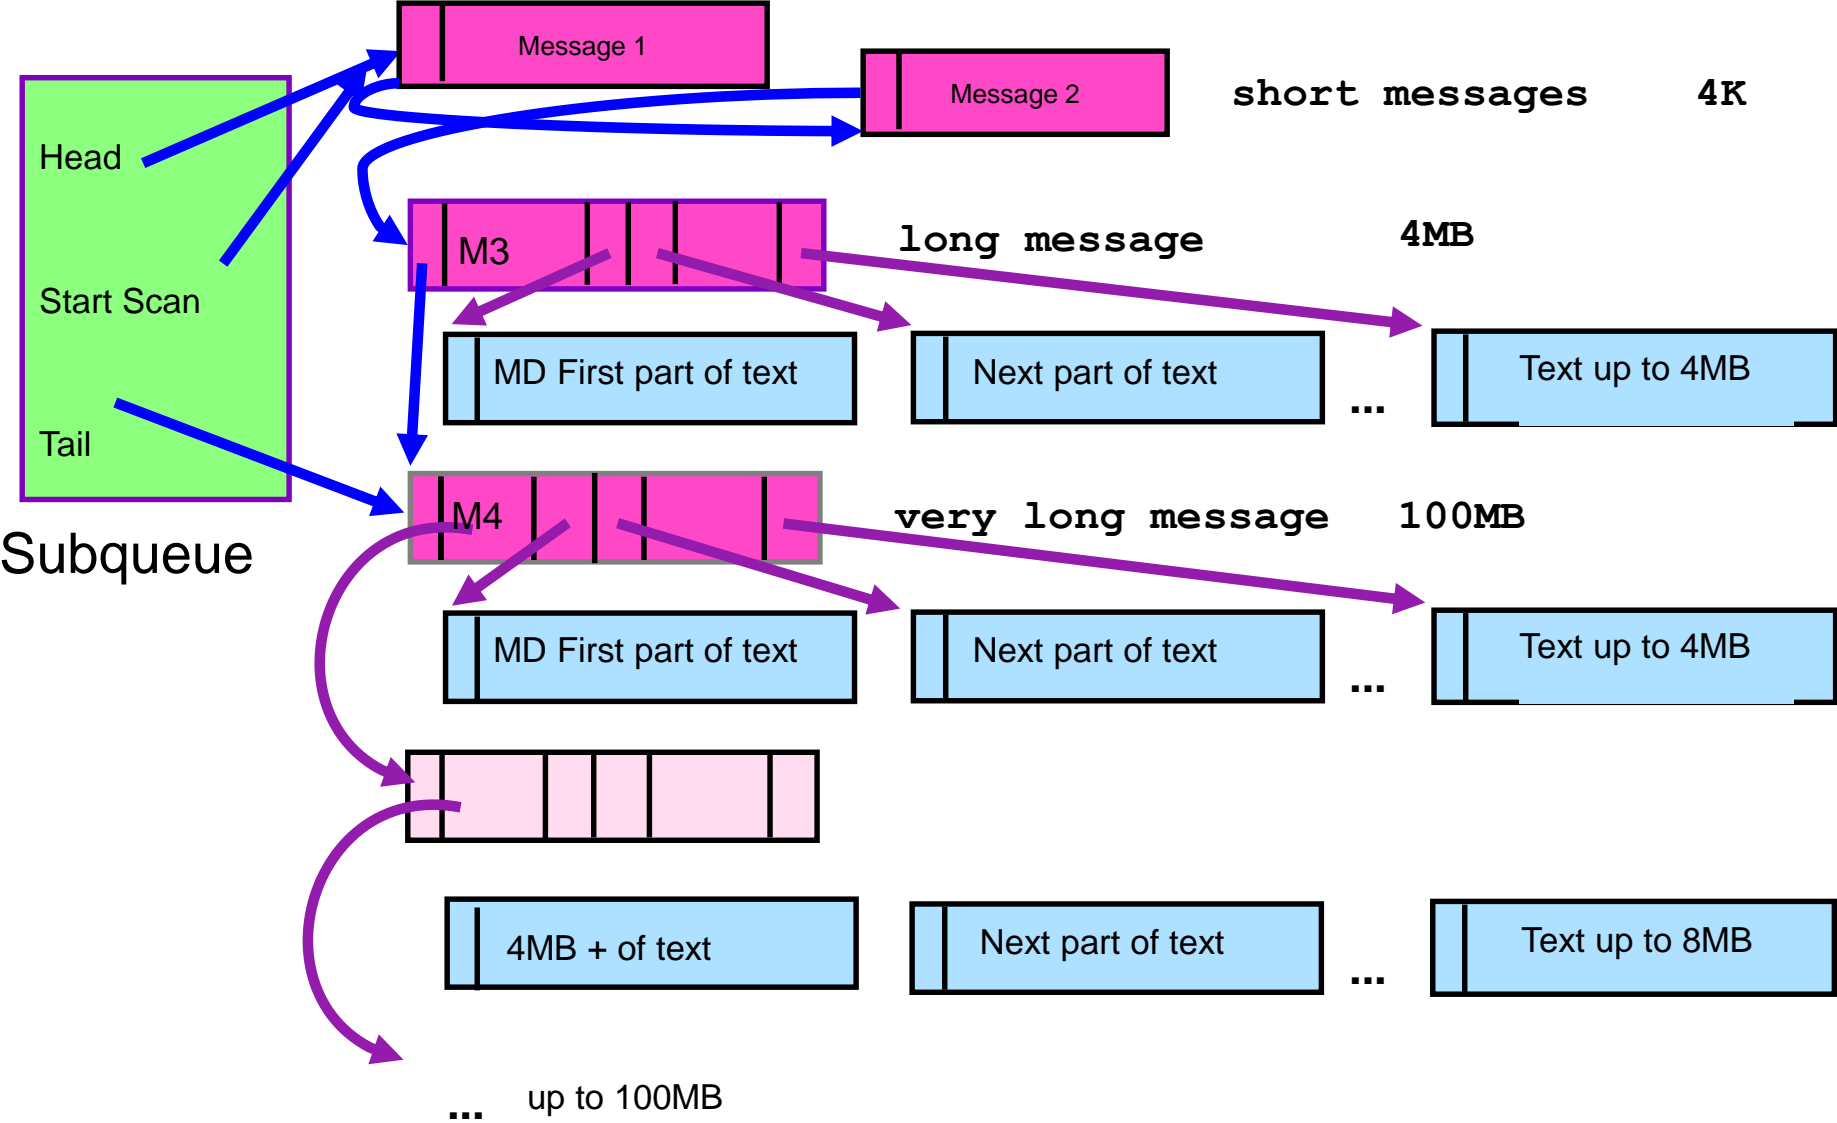

- Queue manager performance
 - Knowing how the pieces fit together
- Application performance
 - If the queue manager is not tuned, responsiveness can be affected
- Problem resolution

One of these things is not like the other

- MQ is NOT a database

Private Queue Message Storage

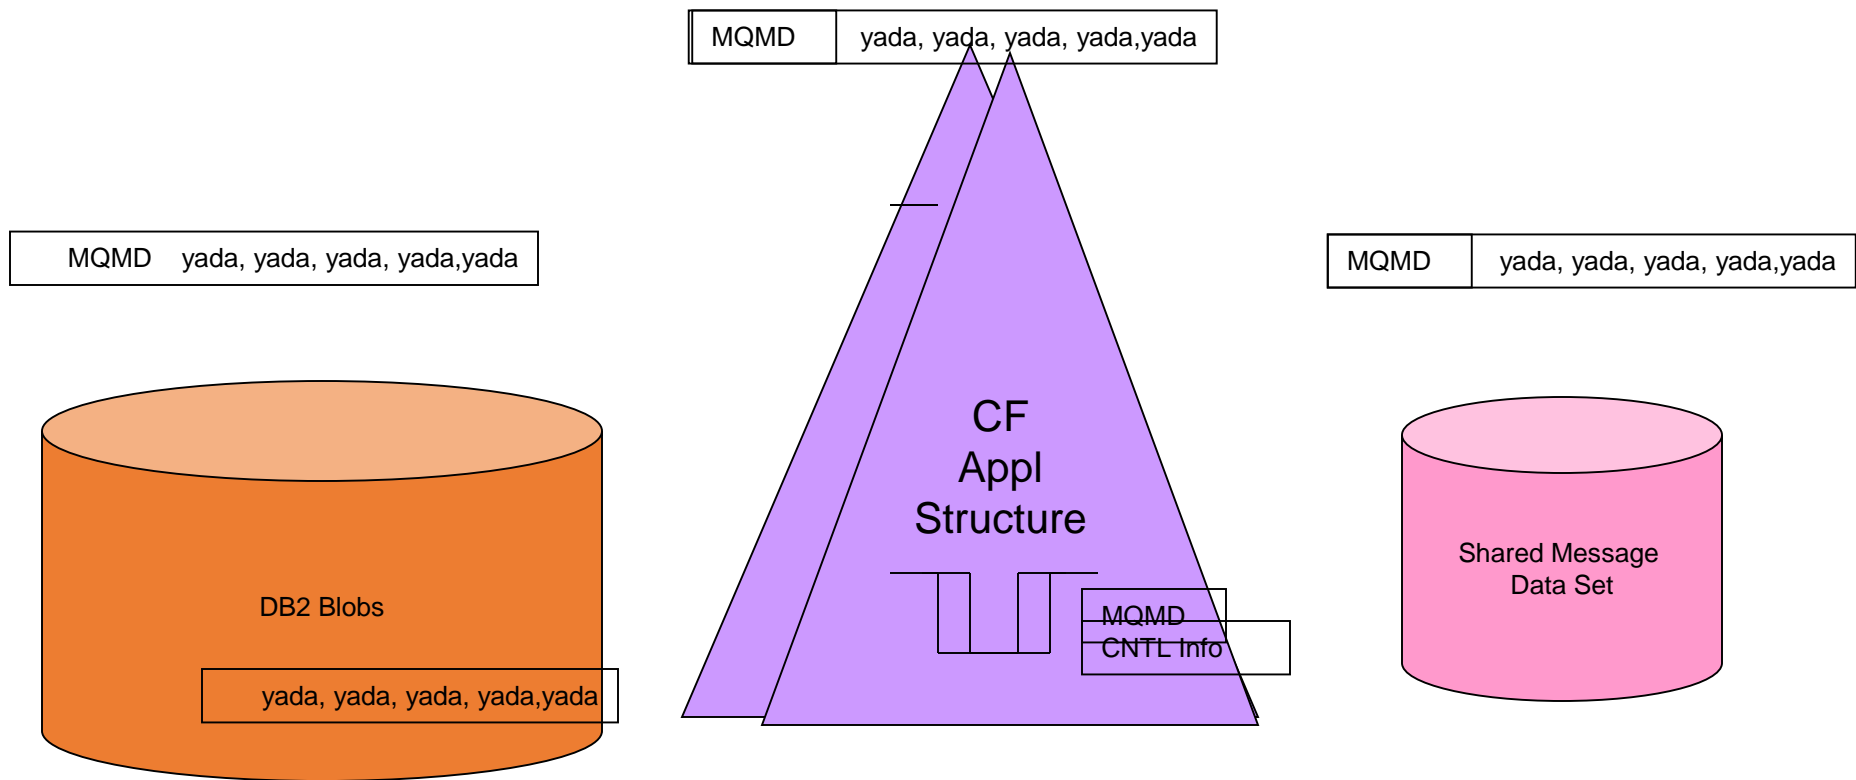

Shared Message Queue Storage Using CF List Structures

Shared Queue Message Storage

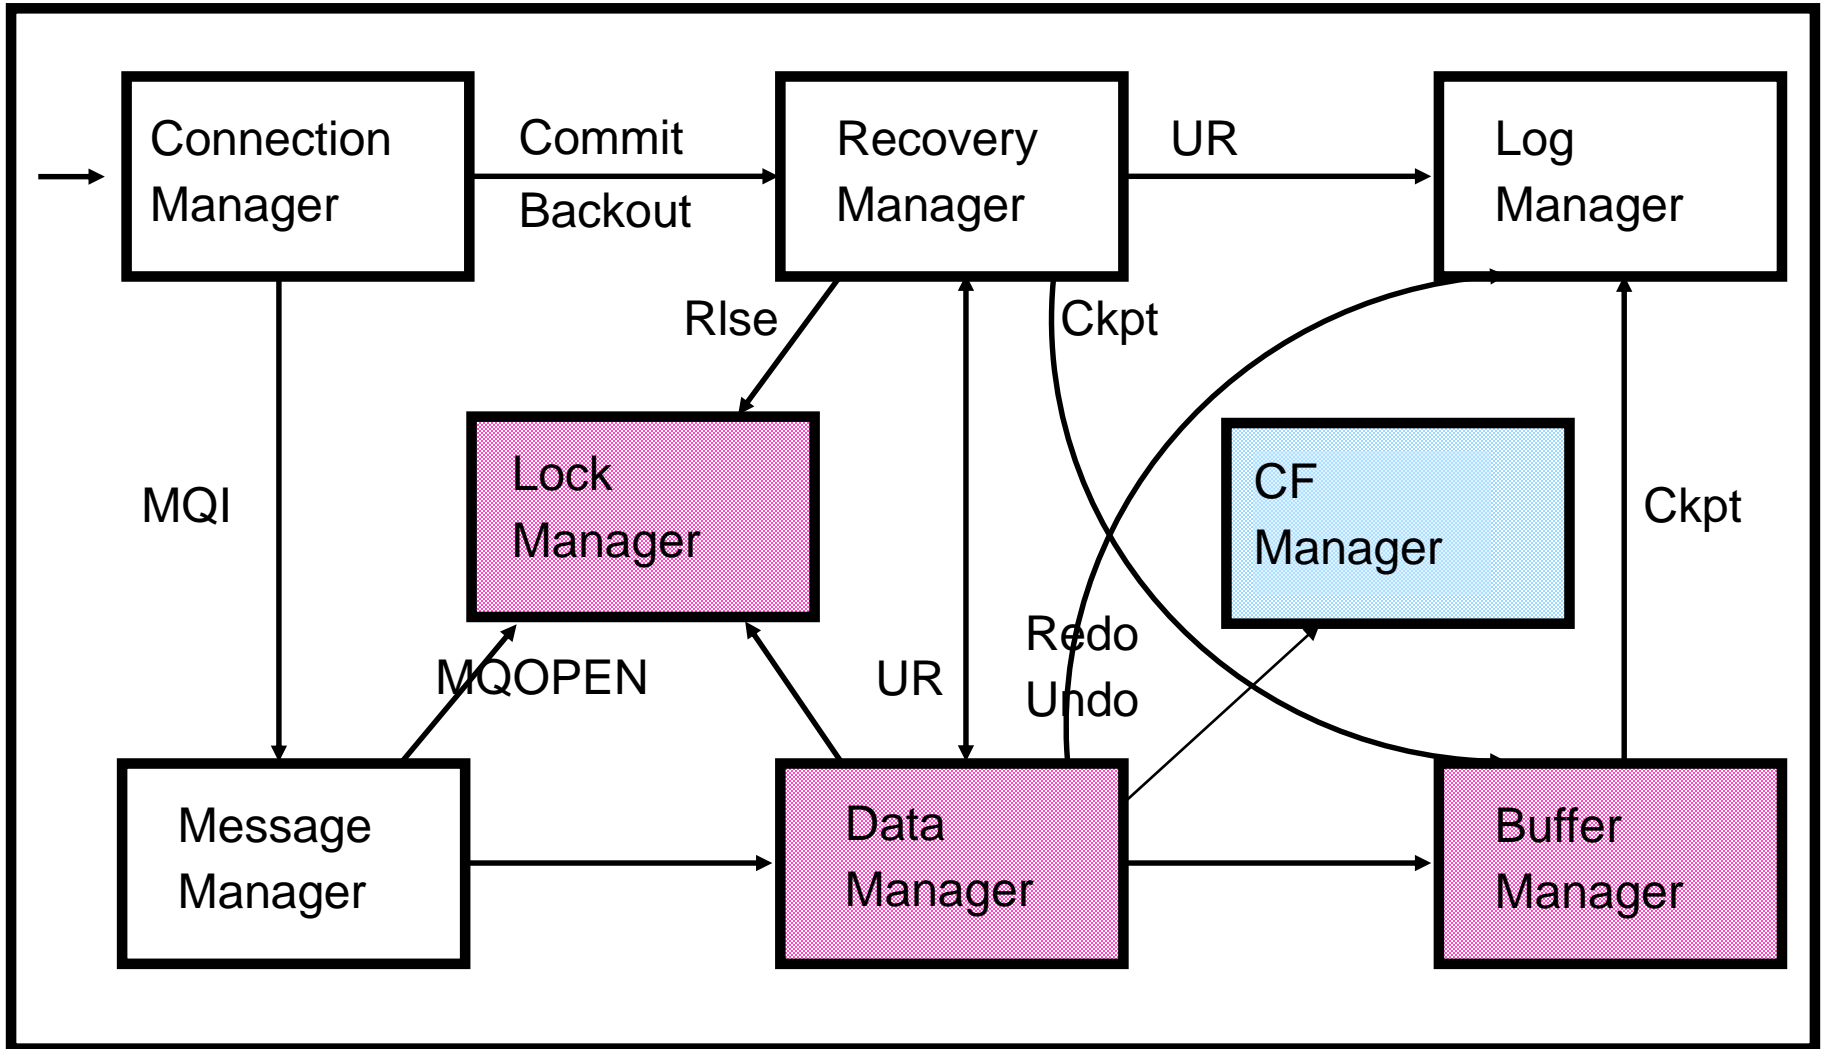

- Messages are stored in one of several ways:
 - Entirely within the list structure
 - Control information (CI) on list structure, message body in DB2
 - CI on list structure, message on Shared Message Data Sets
 - CI and/or message moved to Flash Memory (not shown)

First Line Managers – who does the real work

- To provide the qualities of service that are the basis for WMQ, the real work within the queue manager is divided into logical 'workers' or managers. They interact with the applications and the underlying z/OS resource managers.
- They include:
 - Connection Manager – not the Channel Initiator, but local connections
 - Recovery Manager
 - Log Manager
 - Message Manager
 - Topic manager
 - Data Manager
 - Buffer Manager
 - Lock Manager
 - Storage Manager
 - CF Manager
 - Security Manager.....

Building Blocks - Resource Managers

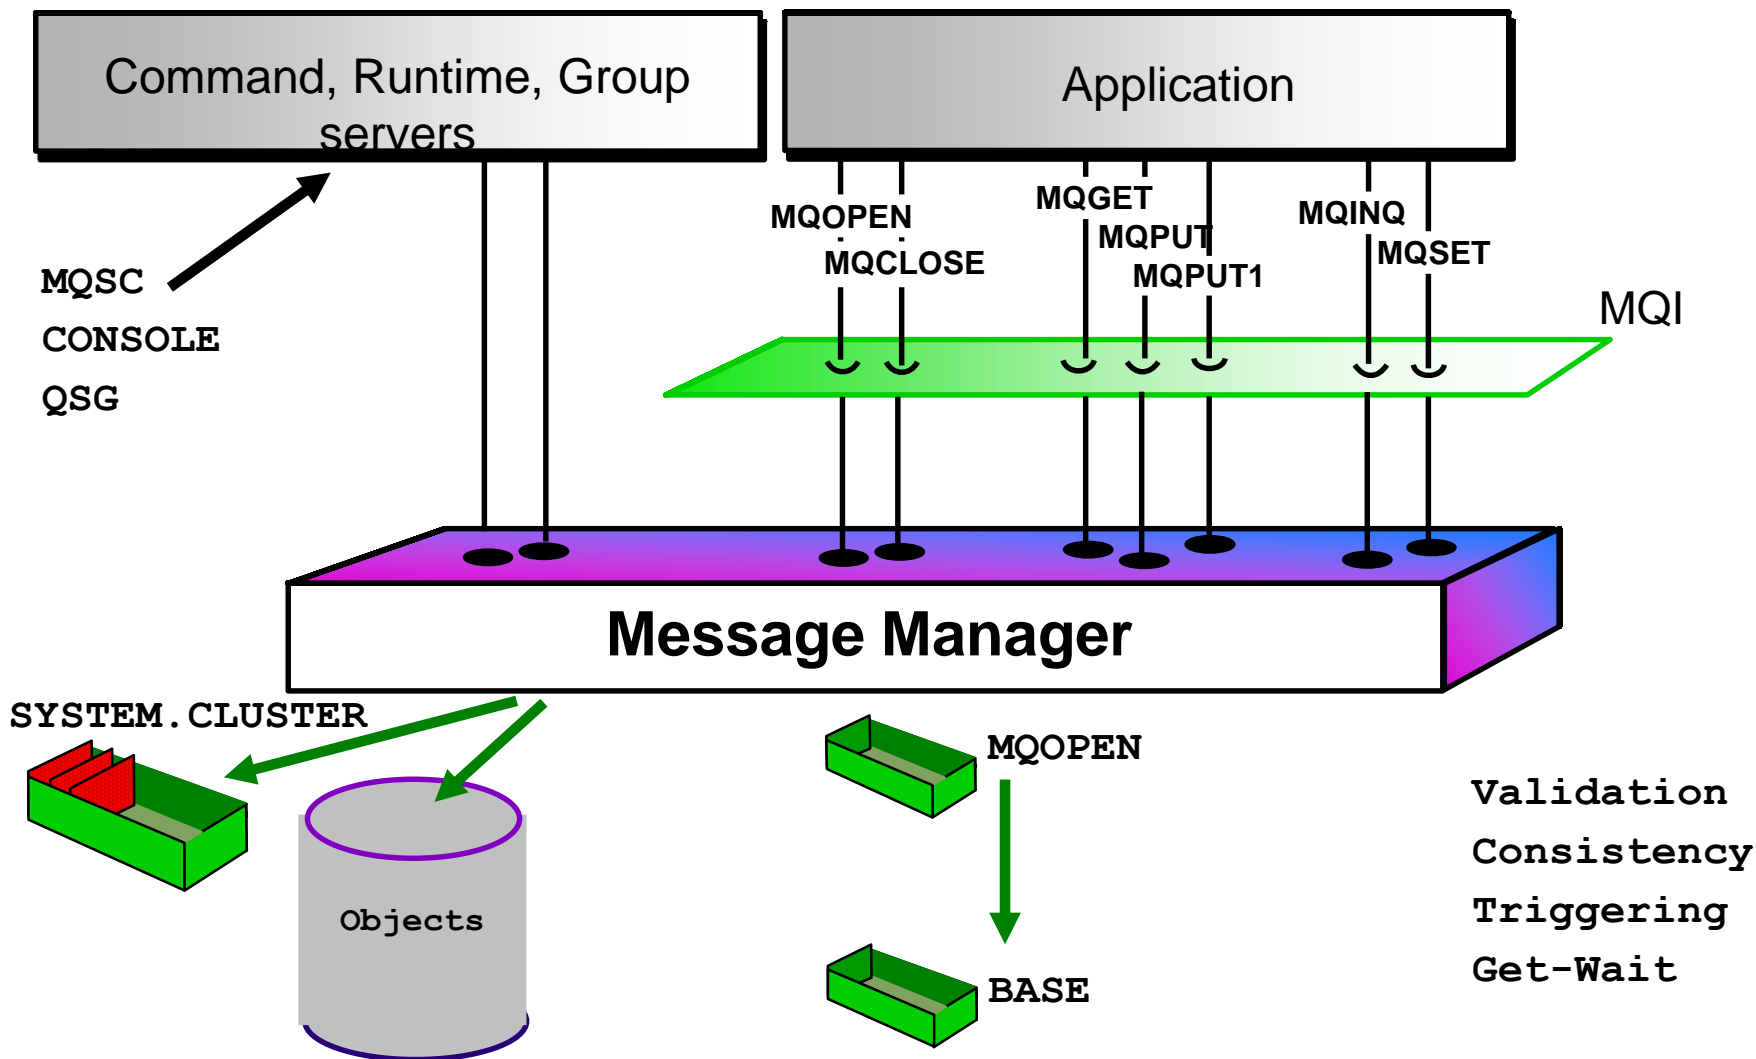

Handling Applications - Connection Manager

Getting requests into WMQ - Stubs and Adapters

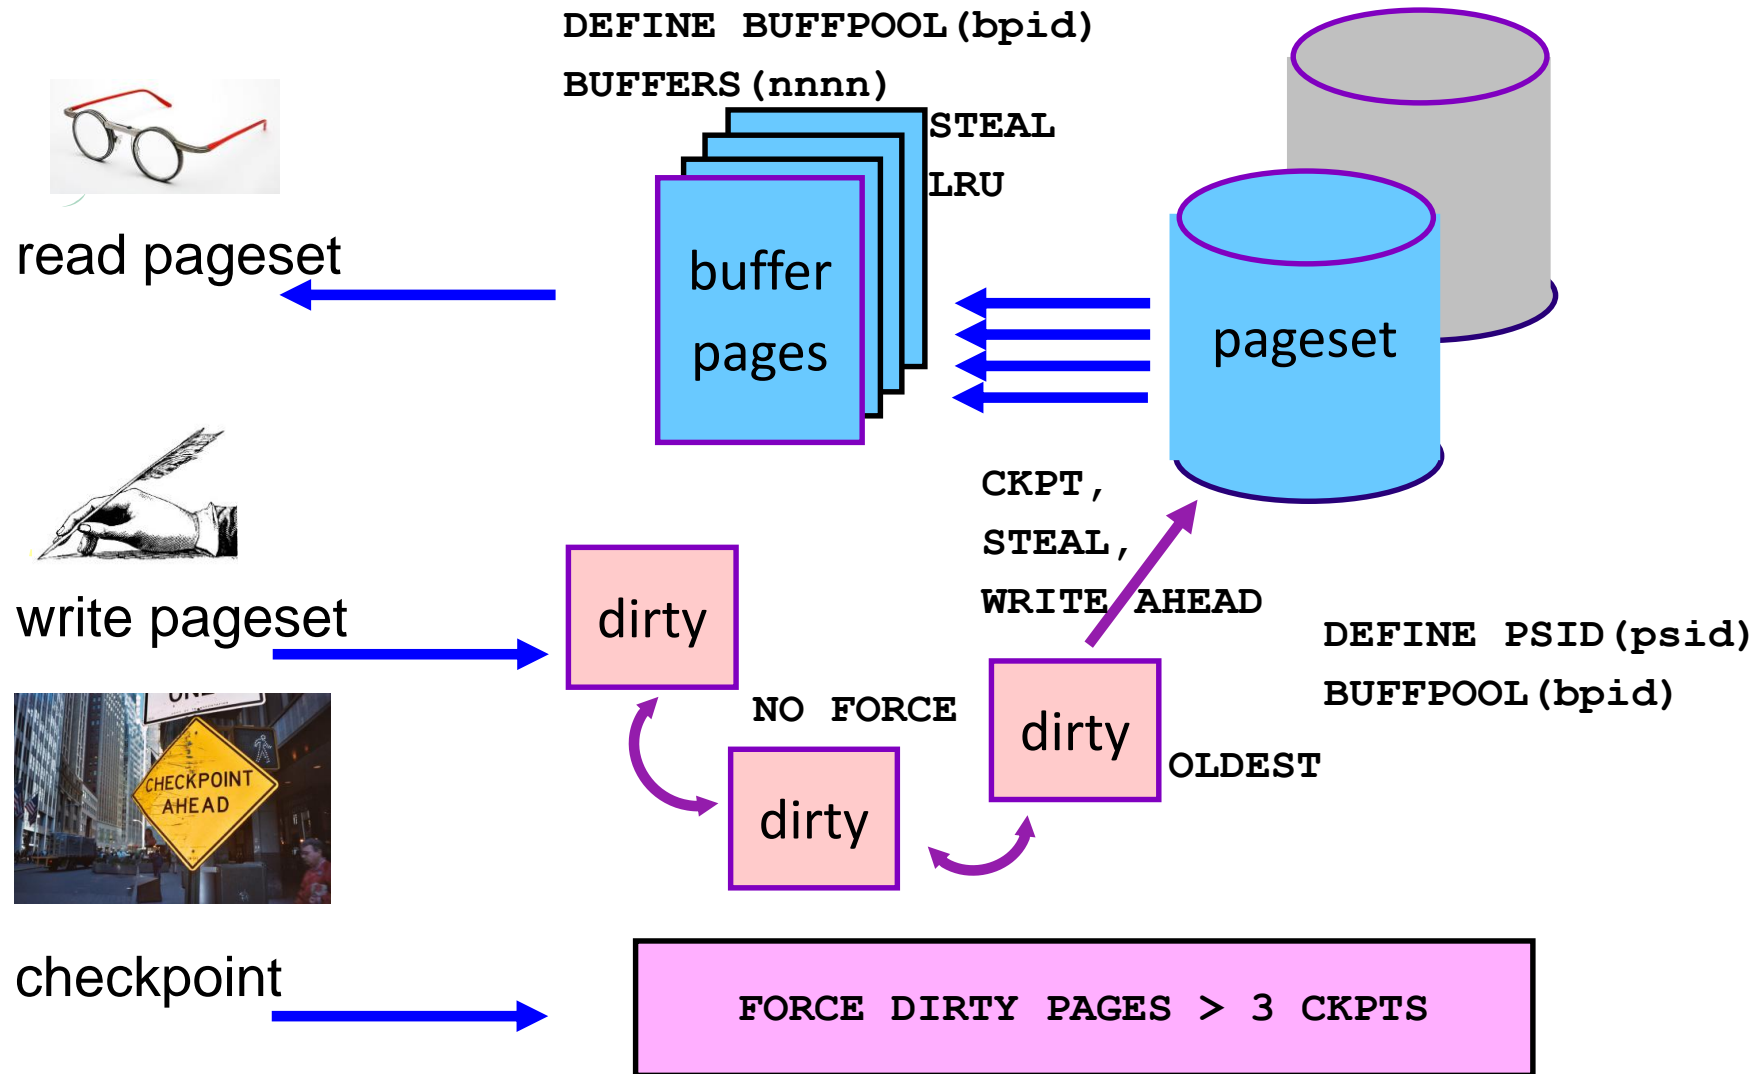

Controlling the MQI and MQSC - Message Manager

Controlling Messages and Objects - Data Manager

Buffer Manager – High Performance storage and retrieval

Providing Logging Interfaces - Log Manager

- Log read and write functions
- Log Shunting
- Multiple active log data sets and archive
- Archive inventory management
- Duplexed for reliability
- “Bootstrap” file
 - End of log location
 - Archive inventory
- Various Utilities

Concurrency and Isolation - Lock Manager

Scenario – Persistent MQPut to a Triggered Queue

Application	Message Manager	Data Manager	Buffer Manager	Recovery Manager	Log Manager	Lock Manager
MQOPEN						
						ACQUIRE LOCK
		LOCATE QUEUE IN HASH TABLE				
	SECURITY BASE NAME					
	ACQUIRE HANDLE					
MQPUT						
	USE HANDLE					
		LOCATE PAGE TO HOLD MSG				
			BUFFER PAGE			
				START UR	LOG RECORDS	
					LOG RECORDS	
	CHECK TRIGGER RULES					
MQCMIT						
					FORCE LOG	
						RELEASE LOCKS

Scenario - MQGet from a Queue

Application	Message Manager	Data Manager	Buffer Manager	Recovery Manager	Log Manager	Lock Manager
MQOPEN						
						ACQUIRE LOCK
		LOCATE QUEUE IN HASH TABLE				
	SECURITY					
	BASE NAME					
	ACQUIRE HANDLE					
MQGET						
	USE HANDLE					
		FIND MSG (INDEX / NEXT)				
			BUFFER PAGE			
				START UR	LOG RECORDS	
					LOG RECORDS	
MQCMIT						
					FORCE LOG	
						RELEASE LOCKS

Summary

- Delivers transactional messaging
 - Enables robust business applications
- Complex, but well organized
 - Adapters, Address spaces, Resource Managers
- Designed for throughput, availability and scalability
 - Logging, Buffering, Locking, Communications
